EDUCATION:

Loyola Marymount University - B.S

Bachelor of Science Computer Science

Minor in Interactive Gaming and Immersive Media

Los Angeles, CA

August 2021 - May 2025

Loyola Marymount University - M.S [3.8]

Master of Science Computer Science Predicted

Los Angeles, CA

May 2025 - May 2026

PROFESSIONAL EXPERIENCE AND EXTRACURRICULARS:

LMU Department of Computer Science

Teacher's Assistant

Los Angeles, CA

May 2024 - Present

- Responsible for pioneering recitations for LMU's Artificial Intelligence class, including covering class material in depth and thoroughly assisting students, resulting in a +15% average midterm score.
- Additionally responsible for grading Artificial Intelligence, Data Structures, and Mobile Applications, as well as pinpointing and addressing recurring academic issues for future instruction by faculty.
- Active tutor for both Artificial Intelligence and Mobile Applications.

Pantry (Startup)

Software Engineer

Los Angeles, CA

February 2025 - May 2025

- Worked with software developers in the development of a social media prototype, using Swift, Python, Firebase, and computer vision models.
- Defined technical specifications and designed architecture, resulting in a streamlined user experience with 95% positive feedback.
- Gained practical software engineering experience through designing scalable systems and ensuring reliability across platforms.

Game Development Club

Vice President/Treasurer

Los Angeles, CA

June 2023 - May 2025

- Coordinated in creation of a 30-person game development team in a semester-wide project, including arranging guest speakers, tutorial workshops, and coordination and representation of mock software engineering department.
- Assisted with coordination of industry tours and interviews with industry professionals, as well as with multiple university departments to fund tours and convention excursions [GDC].

PROJECTS AND COURSEWORK:

GLHF + Sharkitect

- Built a physics engine leveraging C and OpenGL, which handles gravity and collision between multiple types of shapes, and performs custom vector calculations.
- Contributed in development of custom programming language (GLHF), including defining grammar, and creation of compiler, analyzer, and optimizer for said language.

AI, Cognitive Systems, and Natural Language Processing Coursework

- Used logical inference, probabilistic & causal reasoning, fundamentals of data science, machine learning, deep learning, and generative models to code [dynamic AI agents](#).
- Worked in Python libraries such as Numpy, Pandas, Torch, Pgmpy, SKlearn, and Tkinter to enhance code functionality and readability.
- Adapted a Maximum Lyapunov exponent-based slime mold algorithm in p5.js, which simulated real-world slime behavior and is capable of handling hundreds of rendered Agents simultaneously.

RELEVANT SKILLS AND LANGUAGES:

Python (Numpy, Pytorch, Pgmpy, SKlearn, nltk), C++, C#, Java, React, Unity, Unreal Engine 5, Git, Blender, Swift, OpenAI API, [p5.js](#), Agile, Jira, SQL
